

# VENTURA<sup>®</sup> LEGNOKLAD **alpha**

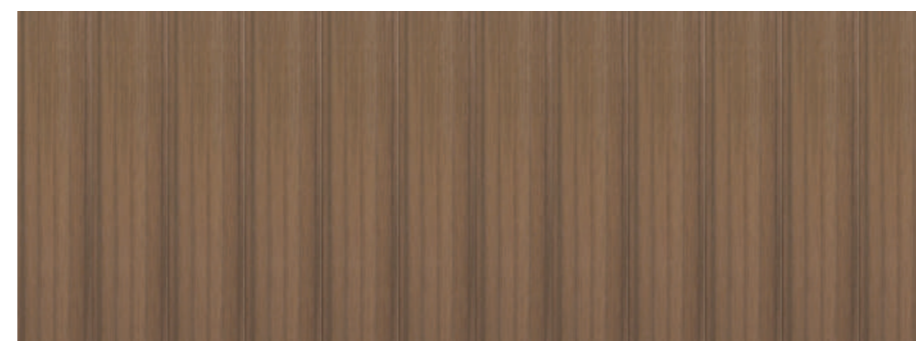

ALPHA and ALPHA-X claddings can be applied according to individual choices and aesthetic preferences. They can be arranged symmetrically or in a random manner, using varying widths of boards to achieve a variety of effects. Few suggestions are illustrated below for the reference.

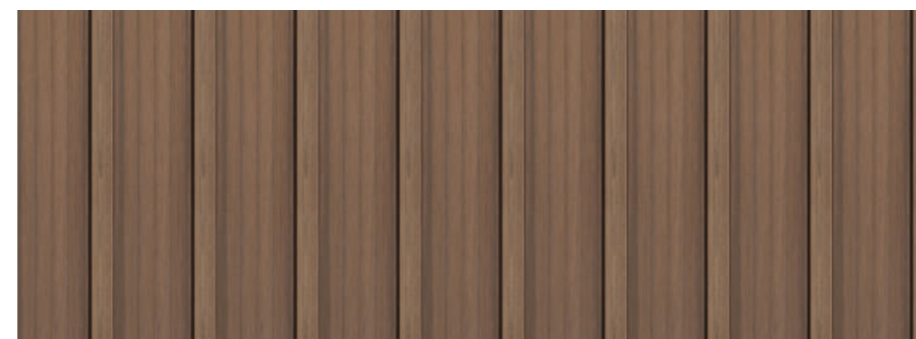

Additionally, they can incorporate different colour combinations to further enrich the design impact of the cladding surface.

### INSTALLATION INSTRUCTIONS

1. Fix the Aluminium Channels to the wall at a 300 mm/350 mm interval with expansion screws. The spacing between two adjacent screws should be 500 mm.

2. Double Aluminium Channels are needed at the end-to-end joint between two cladding boards to ensure that each board is supported by Aluminium Channel.

3. Leave an expansion gap of about 8 mm between the ends of two cladding boards to avoid the risk of cracking and warping.

4. Always pre-drill pilot holes before driving screws to avoid damage to the cladding board.

5. *For installation on ceiling*  
Keep a gap of at least 10 mm between channels and wall or any barrier, and also any board and wall or barrier. A gap of at least 25 mm should be reserved between the screw and the edge of the board.

14 Gauge Aluminium Channels of 25mm x 38mm in size.

Screw after 10 mm from board's end
